

I am writing to respectfully request that xm satellite radio be allowed to continue to broadcast traffic and weather. As a paying customer of this service I utilize the traffic and weather station on my daily commute between the philadelphia and new york metropolitan areas. The ease of use with this service and its valuable information are unparalleled. Limiting the content paid for by a conscious consumer who chooses a premium service is not right. I as an american consumer should not be hindered by the National Association of Broadcasters (A special interest group) when I am looking to obtain information from any media outlet.
